Experience - 3+ years

Payatu - Pune June 2025 – Present

Full Stack Developer ★ *Awarded with Rising Star Award*

- Built a real-time notifications system with global notification management using **Server-Sent Events (SSE)** connections in **Next.js**, ensuring seamless live updates across all application views.
- Migrated legacy API calls to **RTK Query**, eliminating manual duplicate API requests, improving performance through automatic caching, and reducing unnecessary re-renders across the application.
- Designed and developed an AI chatting interface with a seamless conversational UI in **Next.js**, integrated with **SSE** for real-time streaming responses, and wrote backend plugins that the AI uses internally to connect with the database and workflow systems.
- Integrated **Redux** store for centralized state management across the application, ensuring consistent data flow and predictable UI state transitions.
- Built comprehensive asset and SBOM report views, and implemented report generation logic converting HTML to PDF in the backend for downloadable reports.
- Integrated **Web Workers** for heavy computation tasks and developed a decompiler UI to handle and display large amounts of data seamlessly, including potential day-zero vulnerability handling.
- Developed CVE and package dashboards with interactive data visualizations, managed global alert and toast notification systems fully controlled by backend configuration.
- Created chat APIs in the backend for the AI chatting feature, handling message processing, conversation history, and plugin orchestration.
- Created a file manager interface for firmware file browsing and display, along with SBOM dashboard, firmware management UI, and numerous frontend enhancements across the platform.

Tolaram Cricket (Freelance) Feb 2025 – May 2025

Full Stack Developer

- Developed a tournament betting system for cricket matches using **MySQL**, **React**, and **Node.js**, successfully handling 1000+ concurrent users, allowing users to select matches and place bets on specific questions.
- Implemented a comments feature where users can interact in match-specific rooms, creating backend infrastructure with **Node.js** to assign comments to specific tournament rooms.
- Engineered tournament round betting functionality, enabling users to place bets on different stages of tournaments such as semi-finals using **Node.js**.
- Created "Super 12" feature similar to Dream11, allowing users to select teams of 12 players with captain and vice-captain designations, implementing credit limits and team creation constraints in **Node.js**.
- Developed a sophisticated leaderboard system using **Redis** sorted lists for real-time rankings, with periodic database backups via cron jobs running hourly for data persistence in **Node.js**.
- Built Python processing scripts to calculate user points based on betting outcomes and player performances, automatically updating user standings.
- Designed comprehensive admin panel enabling tournament management, including team creation, match setup, player score updates, and analytics dashboard for monitoring match and user betting statistics using **Node.js**.

Hubhopper - Delhi April 2024 – Oct 2024

Podcast Hosting and Distribution platform

Full Stack Developer

- Designed and optimized embedded player interface using **React**, and developed comprehensive analytics using **ElasticSearch** and **PHP** including Listen Through Rate (LTR), unique listener count per video second, and overall video performance metrics.

- Developed and integrated chapter feature for podcast episodes, encompassing frontend UI (**React**) and backend API enhancements in **Node.js**. Implemented robust chapter management capabilities, enhancing user interaction and content navigation for podcast episodes.
- Implemented automated email sender for download analytics, utilizing queue mechanisms and **AWS Lambda**, delivering comprehensive analytics as a ZIP file. The solution was developed using **Python** for backend processing.
- Utilized **Next.js** in conjunction with **React** to implement a smooth and dynamic listening experience for podcast episodes, offering real-time audio streaming and reducing load times.
- Engineered comprehensive podcast analytics system, including intuitive UI analytics graphs for enhanced data visualization using **React** and **PHP**.
- Managed batch processing jobs to handle daily listen impressions of podcasts, efficiently storing data in **Elasticsearch** for easy access and analytics. Implemented Cron and **PHP** to ensure seamless execution of processing tasks, providing timely updates for podcast analytics.
- Developed batch deletion functionality for inactive podcasts via RSS feed integration from external platforms using **Node.js**.

Cognizant Technology Solutions - Chennai
Software Engineer (May 2023 – Apr 2024)

- Implemented RTO tracking feature by integrating attendance regularity and work location data for effective monitoring, built with **React** for UI, **Node.js** for backend, and **Next.js** for dynamic page rendering, ensuring faster load times.
- Enhanced user authentication and authorization workflows, leveraging **React** for the frontend and **Node.js** with **JWT** tokens for secure access, while using **Next.js** to manage client-side and server-side rendering based on user roles for optimized performance.
- Led the integration of third-party APIs to fetch employee data for better insights and reporting, developed using **React** on the frontend, **Node.js** on the backend, and **Next.js** to dynamically render employee data on the client-side with efficient server-side fetching.
- Worked on implementing role-based access controls for the portal, ensuring that users from different departments had access to tailored features, using **React** and **Node.js**, with **Next.js** supporting dynamic content rendering based on user roles for enhanced performance.

CSD Intern (Sept 2022 – Mar 2023)

- Internship experience in full-stack development using **AngularJS**, **HTML**, **CSS**, and **Node.js**.

Education

Sastra Deemed University, Thanjavur, B.Tech in Mechatronics

Aug 2018 – Aug 2022

Excellencia Junior College, Hyderabad, MPC

Aug 2016– Aug 2018

Projects

- **Foodie App - Food Delivery App**: Developed a comprehensive food delivery solution with a **React** frontend and a **Node.js** backend using **Express.js** APIs. Implemented features like customer and eatery dashboards, secured API interactions with middleware, and managed data with a **MySQL** database. Added rate limiting, error handling, and logging for robust performance and security.
- **Email Sender**: Developed an automated email sending tool to streamline the process of sending personalized job application emails to recruiters. Built with **React** for the front end and **Node.js** for the backend. Integrated **Redis Queue** to manage email sending tasks efficiently. The tool allows users to input their inbox, subject, and recipient's email, and automatically sends the email along with attachments, saving time and reducing repetitive manual effort.
- **Chat Application** - I've designed a chat application that allows user-to-user communication using **WebSocket** for real-time messaging. The frontend is built with **React**, providing a smooth user experience, while **Strapi** powers the backend and manages data storage, with **LangFlow** integrated to guide users through the application.

Skills

Languages: Python, PHP, Node, JavaScript, TypeScript, HTML, CSS

Framework/Libraries: React.js, Next.js, Node.js, Redux, RTK Query, Tailwind CSS, Slim

Databases: SQL, Redis, Elastic Search, Mongo DB

Message Brokers: Beanstalk

Others: Git, Linux, Cron, DSA, Design Patterns, AWS Lambda, AWS EC2, Docker, Websockets, SSE, Web Workers

Achievements

- ★ Awarded with Rising Star Award at Payatu for outstanding contributions to the firmware security analysis platform.
