Summary

Full Stack Developer with 3+ years in React.js, Next.js, Node.js, Python, Java. Builds scalable web apps, Gen AI integrations, real-time systems (WebSockets, SSE), cloud services (AWS Lambda). Proficient in Redux, RTK Query, Elasticsearch, Redis, MySQL, MongoDB, RabbitMQ.

Skills

Languages: Python, PHP, Java, Node, JavaScript, TypeScript, HTML, CSS

Framework/Libraries: React.js, Next.js, Node.js, Redux, RTK Query, Tailwind CSS, Slim

Databases: SQL, Redis, Elastic Search, Mongo DB

Message Brokers: RabbitMQ, Beanstalk

Others: Gen AI, Blockchain SDK, Git, Linux, Cron, DSA, Design Patterns, AWS Lambda, AWS EC2, Docker, Websockets, SSE, Web Workers

Experience

Payatu - Pune

June 2025 – Present

Full Stack Developer – Awarded with Rising Star Award

- Built real-time notifications system using **SSE** in **Next.js** with global notification management across all views.
- Migrated legacy API calls to **RTK Query**, eliminating duplicate requests, improving performance through automatic caching, and reducing unnecessary re-renders.
- Designed **Gen AI** chat interface in **Next.js** with **SSE** streaming, and wrote backend **Gen AI plugins** in **Python** for database and workflow integration.
- Integrated **Redux** store for centralized state management, ensuring consistent data flow and predictable UI state transitions.
- Built asset and SBOM report views, and implemented HTML-to-PDF report generation in the backend for downloadable reports.
- Integrated **Web Workers** for heavy computation tasks and developed a decompiler UI to handle large data seamlessly, including day-zero vulnerability handling.
- Developed CVE and package dashboards with data visualizations, and global alert/toast notification systems controlled by backend config.
- Created backend chat APIs using **Python** for **Gen AI** feature, handling message processing, conversation history, and plugin orchestration.
- Created file manager for firmware browsing, SBOM dashboard, firmware management UI, and frontend enhancements across the platform.
- Developed **Gen AI agents** and **Gen AI plugins** for chatbot systems and integrated **blockchain wallets** for bridge transactions.

Tolaram Cricket (Freelance)

Feb 2025 – May 2025

Full Stack Developer

- Developed a tournament betting system for cricket matches using **MySQL**, **React**, and **Node.js**, handling 1000+ concurrent users with match betting and bet placement.
- Implemented a comments feature for match-specific rooms, creating backend infrastructure with **Node.js** to assign comments to tournament rooms.
- Engineered tournament round betting functionality, enabling bets on different stages such as semi-finals using **Node.js**.
- Created “Super 12” feature (Dream11-like) with 12-player team selection, captain/vice-captain picks, credit limits in **Node.js**.
- Developed a leaderboard system using **Redis** sorted lists for real-time rankings, with periodic database backups via cron jobs for data persistence in **Node.js**.
- Built Python processing scripts to calculate user points based on betting outcomes and player performances, automatically updating standings.

- Designed admin panel for tournament management, team creation, match setup, player score updates, and analytics dashboard using **Node.js**.

Hubhopper - Delhi

April 2024 – Oct 2024

Podcast Hosting and Distribution platform

Full Stack Developer

- Designed embedded player interface using **React**, and developed analytics using **ElasticSearch** and **PHP** including LTR, unique listener count, and performance metrics.
- Developed chapter feature for podcast episodes with frontend UI (**React**) and backend APIs in **Java** for content navigation.
- Implemented automated email sender for download analytics using queue mechanisms and **AWS Lambda**, delivering analytics as a ZIP file using **Python**.
- Utilized **Next.js** with **React** for smooth podcast listening experience with real-time audio streaming and reduced load times.
- Engineered podcast analytics system with intuitive UI analytics graphs for data visualization using **React** and **PHP**.
- Managed batch processing for daily listen impressions in **Elasticsearch**, using Cron and **PHP** for timely analytics updates.
- Developed batch deletion functionality for inactive podcasts via RSS feed integration from external platforms using **Java**.

Cognizant Technology Solutions - Chennai

Software Engineer (May 2023 – Apr 2024)

- Implemented RTO tracking by integrating attendance and location data with **React** and **Next.js** for dynamic rendering.
- Enhanced authentication and authorization with **React**, **JWT** tokens, and **Next.js** for SSR/CSR based on user roles.
- Integrated third-party APIs for employee data insights using **React** and **Next.js** with server-side fetching.
- Implemented role-based access controls ensuring department-specific feature access with **React** and **Next.js**.

CSD Intern (Sept 2022 – Mar 2023)

- Internship experience in full-stack development using **React**, **HTML**, and **CSS**.

Education

Sastra Deemed University, Thanjavur, B.Tech in Mechatronics

Aug 2018 – Aug 2022

Excellencia Junior College, Hyderabad, MPC

Aug 2016 – Aug 2018

Projects

- Auto Email Sender: Built an automated outreach system using **Python** that scrapes LinkedIn (hiring posts, recruiter profiles, company employees) via **Apify**, deduplicates contacts, queues emails through **RabbitMQ**, and auto-sends personalized emails with resume attachments — fully automated with cron jobs.
- Tic-Tac-Toe Multiplayer: Built a real-time multiplayer Tic-Tac-Toe game using **React** on the frontend and **Nakama** game server on the backend. Implemented live **WebSocket** connections for real-time matchmaking, move synchronization, and game state management with server-authoritative logic, leaderboard system, and private room support.

Achievements

Rising Star Award at Payatu for outstanding contributions to the team.
